Features

1. **Extremely small size**
   Board footprint as well as the length, width and height of the connector has been reduced in order to minimize use of valuable space in today’s miniature devices. With the miniSD™ card inserted the overall length is shortest in the industry.

2. **Push-in / Push-out card ejection**
   Inserted card is securely held in place with an approximate force of 4 N, assuring reliable connection and retention in the connector, even when subjected to accidental shock. When pushed again, the card will self-eject to distance of 4 mm, allowing safe removal from the connector.

3. **Protection against card loss**
   Built-in card retention springs will keep the card inserted when card may be accidentally partially pulled-out.

4. **Protection against reverse card insertion**
   The ejection mechanism is designed not to lock when the card is inserted in reverse, alerting the user to insert it correctly. Reverse card insertion will not damage the contacts.

5. **Effective grounding and shielding**
   The VSS contacts connect directly to the metal cover, assuring superior ground connection (Patents pending.) In addition, metal cover will connect with the PC board surface at four points, providing highly effective grounding and shielding of the connector.

6. **Durable, load-resistant construction**
   While miniature in size and lightweight, the use of metal cover assures it’s reliable and stable performance.

7. **Two-point contact**
   Two-point contact offers high contact reliability.

8. **Built-in card detection switch**
   The card detection switch is a normally closed, opening when the card is inserted.

9. **RoHS Compliant**
   All components and materials comply with the requirements of EU Directive 2002/95/EC.

Applications

Mobile phones, digital cameras, PDA’s and any other portable device requiring use of miniSD™ memory card.

*miniSD™ is a trademark of the SD Card Association.*
DM2 Series miniSD Card Connectors

**Product Specifications**

**Note 1:** Includes temperature rise caused by current flow.
**Note 2:** The term "storage" refers to products stored for long period of time prior to mounting and use. Operating temperature range and humidity range covers non-conducting condition of installed connectors in storage, shipment or during transportation.

**Ordering information**

**DM2** - **- PEJ -blast**

1. Series name: DM2
2. Connector type: A: Standard receptacle B: Reverse receptacle
3. Number of contacts: 11
5. Ground terminal type: S: SMT - at 4 points

DM2 Series miniSD™ Card Connectors

Packaging Specifications

- Embossed carrier tape dimensions (800 pieces per reel)

Reel dimensions

Recommended temperature profile

<Recommended conditions>
- Reflow system: IR/Hot air
- Environment: Room air
- Solder composition: Paste, 96.5%Sn / 3.0%Ag / 0.5%Cu (M705-221CM5-42-10.5 manufactured by Senju Metal Industry Co., Ltd.)
- Test board: Glass epoxy 60mm x 100mm x 1mm thick
- Metal mask thickness: 0.12 mm

This temperature profile is based on the above conditions. In individual applications the actual temperature may vary, depending on solder paste type, volume/thickness and board size/thickness. Consult your solder paste and equipment manufacturer for specific recommendations.

Precautions and recommendations

1. Washing recommendations
   Do not wash the entire connector. Intrusion of washing fluids in the connector may affect the operation of the ejection mechanism, card insertion or electrical performance.
   If required, wash only soldered joints, exercising caution not to allow intrusion of washing solution inside the connector.

2. Use correct card
   The connector is designed for miniSD™ card.
   Although it will withstand reverse card insertion attempts without damage, care should be taken NOT to subject it to extreme insertion forces, angle insertion or card twisting.

3. Do not apply excessive external force
   Application of excessive external force during card insertion or removal may cause malfunction or damage to the connector or card.
